## Abstract—

The Main Objective of this paper to provide

- To create Chatbot like Siri(Apple),Google Assistant(Google)
- Machine learning - Teaching computers how to see patterns in data and act on it.
- Speech recognition and Language understanding - Meaning, being able to understand you when you are talking.

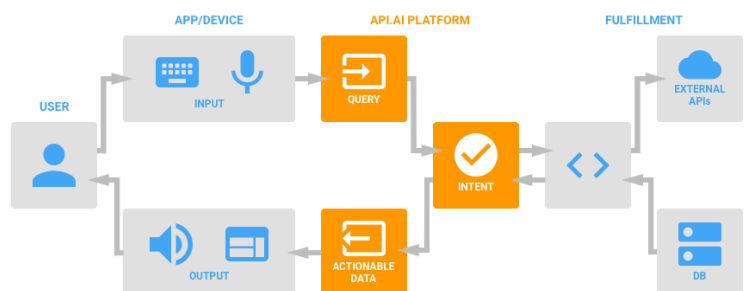

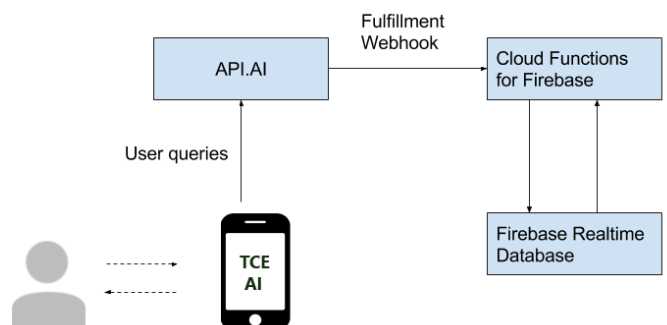

Apps for Assistant are an exciting new way to interact with your users through our App(TCE Assistant). They provide a conversational interface between user and Application , and they are ssimple to build with DialogFlow. You can ask all type of query to Assistant apps .It is act as Good Assistant for us. It is clone app of Google assistant especially for TCE campus

Technology Used to Create this Application,

Firebase is a unified mobile development platform that provides tools to help you build grow and monetize your app.

Firebase Real-time Database is a cloud-hosted NoSQL database that stores data as JSON

Cloud Functions for Firebase lets you run backend code on Google cloud infrastructure that responds to events in your Firebase project.
